Contract Tender Status in NipeX	
Opportunity Phase	25
Technical Phase	1
Commercial Phase	6
Winner Bid	0
Total No. Contracts	33
Concluded	0

NipeX OPERATIONS: JQS & eMARKETPLACE

The Joint Qualification System (JQS) is designed to pre-qualify Suppliers registered in Nigeria. It increases efficiency and instills integrity in the pre-qualification process of the Nigerian oil and gas industry.

The eMarketplace is a collaborative environment that delivers significant value to all Stakeholders in the contracting process through a comprehensive suite of capabilities.

ACCESSING THE NipeX SYSTEM

Accessing the NipeX System: Reverse Auctions

Reverse Auction is a function in the NipeX system. It is one of the options in the Commercial phase of the contracting process. Reverse Auction is an electronic bidding process in which Suppliers compete with each other in real time to provide goods/services to the industry. Each Supplier places his bid online and gradually reduces the quoted price in an attempt to present the most competitive or lowest responsive bid. Through Reverse Auctions, efficient, clear and transparent bids are obtained and the entire process is conducted over a secure internet environment.

In NipeX, some of the features of the Reverse Auction tool are:

- * Tracks price movement and activity per time P Highlights the best bids per Supplier distinctly
- * Provides a complete bid history for each Supplier
- * Automatically translates complicated bid information into easy-to-read charts
- * Real time chat capabilities that enhance interaction between all participating parties and can be saved.
- * Streamlined Auction processes
- * Prompts participants regularly to place new bid
- * The Reverse auction has a start price and the Suppliers place their bids realtime online via the Live Auction

Cockpit (LAC) within the duration defined for the Auction.

- * The Auction rules are defined and communicated to the Suppliers before the Auction commences.
- * Displaying of next valid bid and compresses cycle times.
- * Automatic extensions if necessary
- * A winner emerges at the end of the Reverse Auction.

To execute a successful Reverse Auction on the NipeX system, an Operator is expected to specify the following:

- * The Baseline (Reference) Price: this is the amount an Operator is willing to pay for the service. i.e. the in-house estimate of the contract. This however is not visible to the Suppliers
- * Start Price: this is the initial price set for the reverse auction to begin.
- * Number of Items: this specifies the number of items in the particular contract. These can be a lump sum or separate prices.
- * Duration: this is the time-span which the auction is expected to last.
- * Number of Extensions: this is the total number of extensions that can be granted for the auction.
- * Bid Decrement (Decrement Factor): Decrement is a value by which the Bidder's last bid must decrease. A decrement can be absolute or by percentage. Absolute decrement is a value by which the bidders last bid must decrease while percentage decrement is the percentage of the last bid by which the next bid must decrease or reduce.

Current Tender Advert Opportunities in NipeX System

NAME OF OPERATOR	TITLE OF ADVERT	CLOSING DATE
